HEINZ BLOCH: Unusual Fluid Machinery Failures

Hydrocarbon Processing's well-known webcast series featuring Heinz Bloch is back by popular demand. In this three-part webcast series, global HPI operators, technicians, engineers and management officials will gain in-depth knowledge on how Best-in-Class petrochemicals plants differentiate themselves from their competitors.

Offered under the series title, "Unusual Fluid Machinery Failures," **Part 1** describes the most effective and readily implementable failure analysis strategies, with a clear emphasis on the one or two most readily used by all job functions in the HPI. **Part 2** is devoted to dimensional issues relating to questionable clearances and component interference fits, which can range from virtually zero failure risk to near-certainty of short life or a very high failure risk. Finally, **Part 3** deals with unforeseen lubrication issues.

Here's your chance to be a part of this popular webcast series.

This webcast series is an engaging and effective way to reach targeted maintenance and reliability professionals. *Hydrocarbon Processing* will promote the webcasts through the magazine (30,158 subscribers), e-newsletter readership (48,000 daily) and website traffic (50,400 unique visitors).

HP LIVE WEBCAST: Heinz Bloch Three Part Series

2017 HydrocarbonProcessing.com's Webcast Reservation Form
